adapter, CableIQ Reporter software
CD, (2) RJ45-RJ45 patch cord, USB
cable, coax 'F' push-on adapter,
owners CD and quick start guide,
(4) AA batteries, soft carry case*

A cable tester that gives even the most novice tech the vision to see what speeds existing cabling can support, quickly isolate cabling from network problems, and discover what is at the far end of any cable.

Do you want to reduce the pressure, close trouble tickets faster and save money?
When troubleshooting your network infrastructure, you face many questions. Is the port active? Are the duplex settings matched? Is it a network problem or an Ethernet cable problem? Can the Ethernet cable support the required network bandwidth? CableIQ is the only Ethernet cable tester that can answer all these questions before trouble tickets are escalated to the next level reducing problem escalation by up to 30%.

Main features

- › Know in 4 seconds whether a link, including patch cords, is qualified for voice, 10/100BASE-T, VoIP, or Gigabit.
- › Provides detailed information on the nature and location of cabling performance faults such as crosstalk or large impedance changes.
- › Discover mode shows you exactly what's at the far end of any cable. At the switch, test each cable one at a time. You can quickly see whether the cable is open at the far end, or is connected to a PC - unused ports you can free up and redeploy.
- › Intelligent wiremap test for length, shorts, split pairs, or opens and displays with an intuitive graphical interface where a fault is located.
- › Document your findings.
- › Fluke Networks Quality.

Only during the month of May 2016, you can get 10% discount on the purchase of a Fluke Networks CableIQ Qualification Tester. Contact your sales channel today.
