Loose Tube Fibre Optic Outdoor Cable

12 Element All Dielectric Design

MiDia[®] Dry Core Cable

Issue October 2013 according to **OFS Generic Specification**

Application

Optimised for Air-Blown Installation

Design

- Optical Fibres
- Gel-filled Buffer Tubes
- Non-metallic Central Member
- Water Blocking Material
- Ripcord
- PE-Jacket

Features

- Small tubes for a reduced outer diameter
- Dry Core Design Cable core water blocked by means of dry "water swellable" technology - for quicker, cleaner cable prep for jointing
- Individual coloured tubes

Version illustrated is the 144 Fibre Cable

Fibre Count	Tubes	Core Design	Outer Diameter [mm]	Cable Weight [kg/km]	Standard Length [m]	AT-Code**
12 Fibre	s per Tube	•				
120	10	1+12 (2 Fillers*)	11.2	105	2000 / 4000 / 6000 / 8000	AT-[][][]15CT-120-NM
144	12	1+12	11.2	105	2000 / 4000 / 6000 / 8000	AT-[][][]15CT-144-NM

This table shows nominal diameter and weight values which may differ in shipments.

*Fillers are natural coloured **Please refer to the OFS AT- Code. The blanks specify the fibre type.

Identification

Tube and Fibre Colour Code:												
	1	Blue	2	Orange	3	Green	4	Brown	5	Grey	6	White
	7	Red	8	Black	9	Yellow	10	Violet	11	Rose	12	Aqua

Alternative tube and fibre colour code available on request

Sheath Marking

OFS OPTICAL CABLE MIDIA [ID] [MM/YYYY] [Handset Sign] xxxF [Meter Marking]

Alternative sheath printing available on request.

Issue October 2013 according to OFS Generic Specification

Mechanical Properties and Environmental Behaviour

Tests according to IEC 60794

	Parameter	Requirement	Value		
Tensile Performance:	Long term load	- No attenuation increase*	Load: 1250 N		
IEC 60794-1-2-E1A and E1B		- No fibre strain			
	Short term load, during installation	 No changes in attenuation before versus after load Max. fibre strain 0.55% 	Load: 4000 N		
Crush Performance:	Long term load	- No attenuation increase*	Load (Plate / Plate): 500 N		
IEC 60794-1-2-E3	Short term load	 No changes in attenuation before versus after load No damage** 	Load (Plate / Plate): 2000 N		
Bending Performance:	Handling fixed installed	- No attenuation increase*	Bend radius: 10xD		
IEC 60794-1-2-E11	During installation (under load)	 No changes in attenuation before versus after load 	Bend radius: 20xD D is cable diameter		
Temperatures: IEC 60794-1-2-F1	Operation Installation Storage/Shipping	- No attenuation increase*	-30 to +70°C -15 to +40°C -40 to +70°C		

*No changes in attenuation means that any changes in measurement value, either positive or negative within the uncertainty of measurement shall be ignored. The total uncertainty of measurement shall be less than of equal to 0.05 dB.

** Mechanical damage – when examined visually without magnification, there shall be no evidence of damage to the sheath. The imprint of plates will not be considered as damage.

Shipping Information

Cable Length	Drum Dimensions	(approx.)	Shipping Weight (calc.)		
	Diameter(battened)	Width	Without lagging	With lagging	
2000 m	1050 mm	790 mm	265 kg	290 kg	
4000 m	1450 mm	790 mm	500 kg	540 kg	
6000 m	1600 mm	1055 mm	740 kg	800 kg	
8000 m	1600 mm	1055 mm	970 kg	1030 kg	

The shipping information are given for one-way reels. Reusable reels are available on request.

The information is believed to be accurate at time of issue.

MiDia is a registered trademark of Fitel USA Corp.

The industry's first zero water peak single-mode fibre for reliable full-spectrum performance + enhanced bend performance.

Overview

AllWave^{®+} Zero Water Peak (ZWP) Single-Mode Optical Fibre improves performance for optical transmission systems operating over any part of the entire wavelength range from 1260 nm to 1625 nm compared with conventional single-mode fibre. AllWave+ Fibre offers the exceptional performance of our AllWave Fibre specifications along with a 40% smaller minimum bend radius, a 50% lower bend loss and a 33% improved polarization mode dispersion (PMD) link design value. AllWave+ Fibre intermixes seamlessly with the installed base of single-mode fibres with a nominal mode field diameter of 9.2 μ m.

Product Description

AllWave+ Fibre is a combination ITU-T G.652.D and G.657.A1 compliant fibre ideally designed for use in backhaul, metropolitan, and FTTX networks. Developed and manufactured by OFS, AllWave+ Fibre provides low and stable loss performance in the 1360 – 1460 nm E-band; plus it offers reduced bending loss to improve performance for applications operating in the bend-sensitive 1460 – 1625 nm S, C, and L bands. Its bending performance is far superior to the G.652.D Recommendation and compliant to the G.657. A1 Recommendation, supporting a minimum bend radius of 10 mm and lower bend loss than conventional single-mode fibres. This low bending loss provides improved performance and service reliability and helps to reduce the size of cables and terminals for lower cost installations. AllWave+ Fibre also has the same 9.2 micron mode field (light carrying) diameter of the installed base of single-mode fibres, such as AllWave Fibre, which enables seamless splicing, testing, and faster network turn-up.

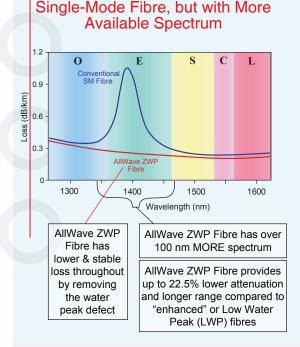

With a composition of high purity synthetic silica throughout both the core and cladding, AllWave+ Fibre has stable and permanent low loss and mechanical reliability. OFS' patented ZWP fibre manufacturing process, which eliminates the hydrogen-aging defects, provides a 50% increase in usable spectrum compared to G.652.A and G.652.B fibre. What's more, its ultra-low PMD enables speed and distance upgrades. AllWave+ Fibre offers dramatically improved performance in almost every characteristic over conventional single-mode fibre and is fully backward compatible to any G.652 compliant single-mode fibre.

Features/Benefits:

- Low optical loss across the entire spectrum from 1260 1625 nm
- Lower bending loss for improved performance and service reliability, and to help reduce the size of cables and terminals
- A 9.2 micron nominal mode field diameter to facilitate splicing and testing
- Geometric control at the industry's tightest level for ultra-low splice loss and improved connector performance
- Low, stable loss performance in the 1360

 1460 nm E-band, enabling 16-channel
 CWDM, DWDM, and FTTX support on a single fibre
- Comprised of high purity synthetic silica for long-term attenuation stability and mechanical reliability
- Ultra-low fibre PMD allows for speed and distance upgrades

Compatible with Conventional

Product Specifications

Physical Characteristics		
Clad Diameter	125.0 ± 0.7 μm	
Clad Non-Circularity	≤ 0.7 %	
Core/Clad Concentricity Error (Offset)	≤ 0.5 μm, < 0.2 μι	m typically
Coating Diameter (Natural)	235 - 245 µm	
Coating-Clad Concentricity Error (Offset)	≤ 12 µm	
Tensile Proof Test (Other proof test levels available on reques		
Coating Strip Force	Range: 1.0 N ≤ C	$SF \le 9.0 N$
Standard Reel Lengths	Up to 50.4 km (31	1.3 miles)

Environmental Characteristics (at 1310, 1550 & 1625 nm)

Temperature Cycling (-60º + 85º C)	≤ 0.05 dB/km
High Temperature Aging (85 $\pm 2^{\circ}$ C)	≤ 0.05 dB/km
Temperature & Humidity Cycling (at -10º C to +85º C and 85 to ~98% RH)	≤ 0.05 dB/km
Water Immersion (23 ± 2º C)	≤ 0.05 dB/km

Applications

AllWave+ Fibre provides outstanding cable performance and design freedom for fibre management systems in:

- FTTX
- Local access
- Mobile backhaul
- Metro access
- Metro edge
- Campus backbones
- Long haul
