

Horizontal Mounting

Vertical Mounting

Smaller Mounting Jaws for FST and FRBU

## Universal Mounting Bracket

The Universal Installation Bracket is designed for securing the full range of HellermannTyton fibre closures in either the horizontal or vertical orientations during installation or maintenance. The choice of orientation allows the installer to place the closure in a position to provide the best access for installation and maintenance.

The Universal Mounting bracket can be clamped to a suitable work bench surface or bolted in place using the mounting holes provided. The position of the clamping jaws is adjustable to enable the full range of closures to be accommodated, from the large UFC to the small FST, meaning only one installation bracket is required to support the full HellermannTyton range.

The Universal Mounting bracket is manufactured from heavy duty high quality materials for a longer service life.

### Features and Benefits

- Suitable for all HellermannTyton fibre closures
- Offers both vertical and horizontal mounting positions
- Simple and quick to mount and use
- Manufactured from high quality materials for longer service life
