

Renew your Versiv™

Unlock more speed, security, and value

Your Versiv Main and Remote has served you well. But after years of use, it may be scratched, slow to boot, or running on tired batteries.

It's proof of our 30+ years of innovation and product longevity — but now it's time to get even more out of your investment.

With the Versiv 2 Main and Remote bundle, you can optimize your workflow, stay compliant with latest cabling standards, and boost productivity with enhanced security — all while continuing to use your existing copper and fiber modules.

This isn't the end of your Versiv. It's the next chapter.

What is Versiv?

Versiv Main and Remote are hardware platforms that host the Fluke Networks certification modules (DSX, CFP, CFM, OFP, FI). They provide power, memory, user interface, and connectivity for testing operations, but the actual measurement intelligence resides in the attached modules.

Versiv Main and Remote		Modules Copper, Fiber, and Kits		
				
Versiv Main	Versiv Remote	DSX5000 (2 modules) DSX8000 (2 modules)	CFP-S (2modules) CFP-M (2 modules) CFP-Q (2 modules) CFM (2 modules)	OFP-S (1 module) OFP-M (1 module) OFP-Q (1 module) OFP-200 (1 module)

Special upgrade offer

Upgrade today and secure your Versiv 2 Main and Remote bundle at a very attractive rate.

Item Number	Model Name	Promo price
6011496	**VERSIV2 MRU KIT INTL – N120**	10,600 SEK
6011533	**VERSIV2 MRUNW KIT IN**	10,600 SEK

** This offer applies only to users of existing Versiv testers. Fluke Networks reserves the right to request Versiv 1 serial number(s).*

Why upgrade from Versiv 1 to Versiv 2?

1 Stay compliant, stay protected

- Firmware version 6.14 ensures Radio Equipment Directives (RED) compliance for Versiv 1 and is the final firmware release for V1 platforms.
- Versiv 2 continues to receive firmware updates to support evolving standards, security requirements, and European Union (EU) directives.
- Built-in password protection and enhanced network security help safeguard your test data today and in the future.

2 Boost efficiency

- Faster processor = quicker tests, faster results transfer, and shorter update times.
- Larger memory to manage more projects.
- Integrated Wi-Fi, no dongles needed.
- Longer battery life keeps you working without interruption.
- Real-time project updates via LinkWare™ Live.

3 Future-proof your investment

- Access to the latest standards and cable libraries.
- Ongoing firmware updates and new features including future releases beyond v6.14.
- Continue using your existing **DSX CableAnalyzer™, CertiFiber™ Pro,** or **OptiFiber™ Pro** modules and the new **CertiFiber Max** — simply plug into your new Versiv 2 mainframe and you're ready to go.

Risks of staying with Versiv 1

- No firmware updates beyond v6.14.
- Future regulatory or security enhancements will not be supported.
- Repairs of non-Gold covered units are no longer possible due to parts availability.
- Slower testing and reduced productivity compared to Versiv 2.

Protect your investment with Fluke Premium Care

- If you already have Fluke Premium Care — Gold, you are covered. If a Versiv Main or Remote fails, you will receive a Versiv 2 main or remote replacement.
- If you're not covered, now is the perfect time to upgrade and add Premium Care for guaranteed peace of mind.
- To take full advantage of future firmware updates (beyond 6.14), we recommend upgrading both your main and remote units to Versiv 2.
